Vibe Coding Launch Checklist (Bot Lodge)

Free to use and share. https://toolpicks.vercel.app

Before you build

[ ] One sentence: who is it for and what does it do?

[ ] List the 3 screens or actions that matter. Skip everything else for v1.

[ ] Pick one builder (Cursor, Replit, Lovable, Bolt, v0) and stick with it for v1.

While building

[ ] Commit or snapshot after every working change.

[ ] Ask the agent to explain any file you don't understand.

[ ] Keep secrets (API keys) in environment variables, never in code.

[ ] Turn on database row-level security before real users sign up.

Before launch

[ ] Test sign-up, log-in, payment and log-out on your phone.

[ ] Ask the agent: "List security risks in this codebase and fix the top 5."

[ ] Add a privacy note and a contact email.

[ ] Set up error alerts so you hear about bugs before users do.

After launch

[ ] Watch real users try it, and fix the first thing that confuses them.

[ ] Ship one small improvement every day.
